## Gamers get leg-up on opponents with Corinex's GameNet

*Connect to the Internet and experience fast, online console gaming anywhere in the home*

(Las Vegas, Nev. – January 7, 2008: CES Booth #74148 Sands Expo and Convention Center) — Playing video games online often limits avid gamers to one television or computer in the home with a poor connection not optimized for serious online gaming. For gamers looking for a solution to their connection troubles, [Corinex](#) introduces **GameNet**, the latest in online console gaming connectivity solutions.

For \$169.99 and with a simple two minute installation, consumers can connect their gaming consoles to the Internet from any room in the home and experience the ultimate gaming adventure.

**GameNet** creates a secure, faster than Wireless, 200 Mbps connection with mobile plug-in adapters which utilize the existing electrical wiring in the home to create the fastest, most stable connection between the Internet and any Ethernet-enabled gaming console. **GameNet** can even connect multiple game consoles together for large gaming events.

"**GameNet** provides gamers with unrivaled Internet gaming performance and convenience," said Brian Donnelly, Corinex's Vice President of Marketing. "The Internet connectivity supplied through **GameNet** is four times faster than Wireless, available in every room of the house and eliminates gamers' biggest enemy: 'lag.' In three easy steps, anyone can begin online console gaming faster than they've ever experienced. Whether playing with a friend next door or gamers on the other side of the world, the connection is flawless and real-time."

**GameNet** is designed for use with XBOX™, XBOX™ 360, Wii™, PS®2, and PS®3.

By connecting one of the **GameNet** adapters to a broadband modem or computer and plugging it into a nearby power outlet, gamers can plug the second adapter into the Ethernet port of their game console in any room of their home. The adapters automatically configure to provide consumers with a secure and fast Internet connection. As rooms are rearranged, the adapters can be moved without harming the online connection.

**GameNet** is available starting today for \$169.99. For more information and to purchase **GameNet**, visit Corinex at [www.corinex.com/retail](http://www.corinex.com/retail).

**About Corinex Communications Corp.**

Corinex AnyWire™ Connectivity solutions distribute high speed IP signals on electrical wiring, coax, and phone lines. Corinex has a Powerline market share of 48% worldwide (In-Stat) and 40% in North America (Frost & Sullivan). Its products are used by tier one service providers including Telefonica and Belgacom to distribute IPTV service throughout the home. Corinex is the recipient of the Frost & Sullivan "Best Product Line Strategy" award, Utilities Telecom Council's Best Automated Metering Infrastructure award for Access, finalist for the International Engineering Consortium InfoVision award for Best Access Technology, Retailvision nominee for Best New Product and Best Product: Digital Home (x2) for Corinex In-Home products and others.
